Introduction

Harvest project is about intellectual property rights for students FCIT. In particular, we're planning on making a software that stores the data of all previous and recent projects, including senior projects and course projects for FCIT that is facilitated to check whether it has plagiarized or not.

Problem definition

FCIT student faces problems in understanding some projects

There are many similar or repeat ideas in a college

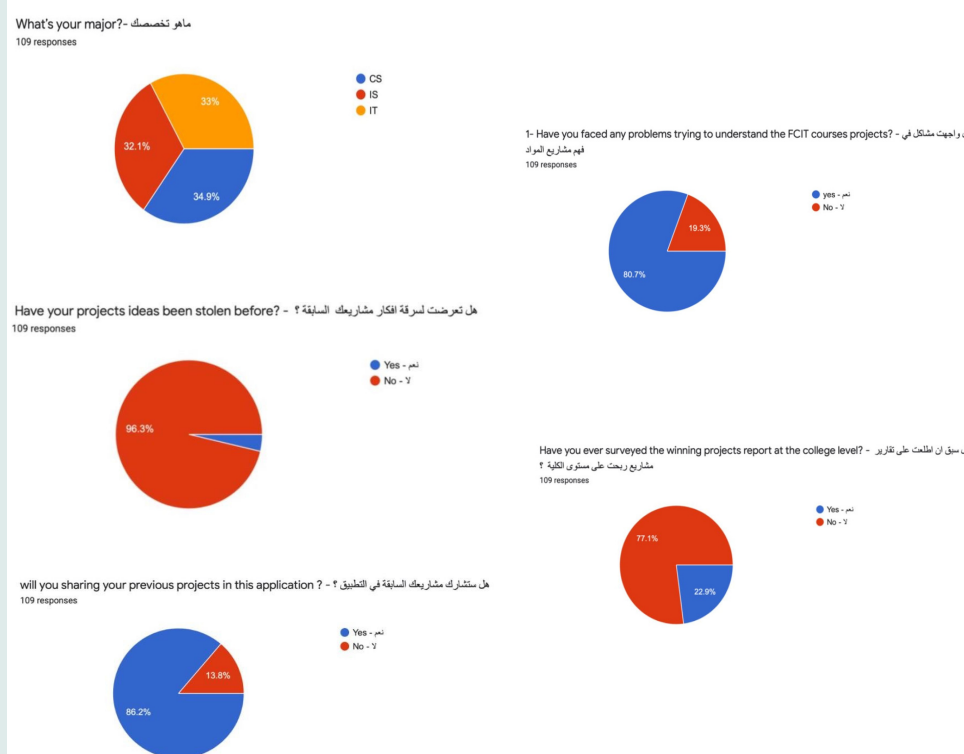

Harvester project is software application all FCIT student projects are placed in it

Goals

- Preserving intellectual property rights.
- Reducing common mistakes in projects.
- Continuity of developing previous projects.
- Easy to understand project of specific courses.

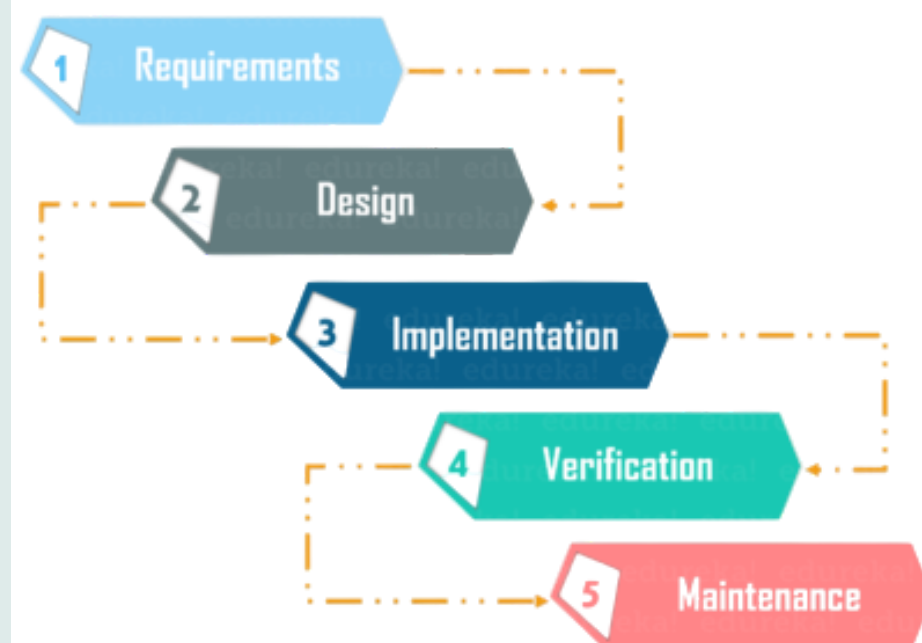

Dats Analyses

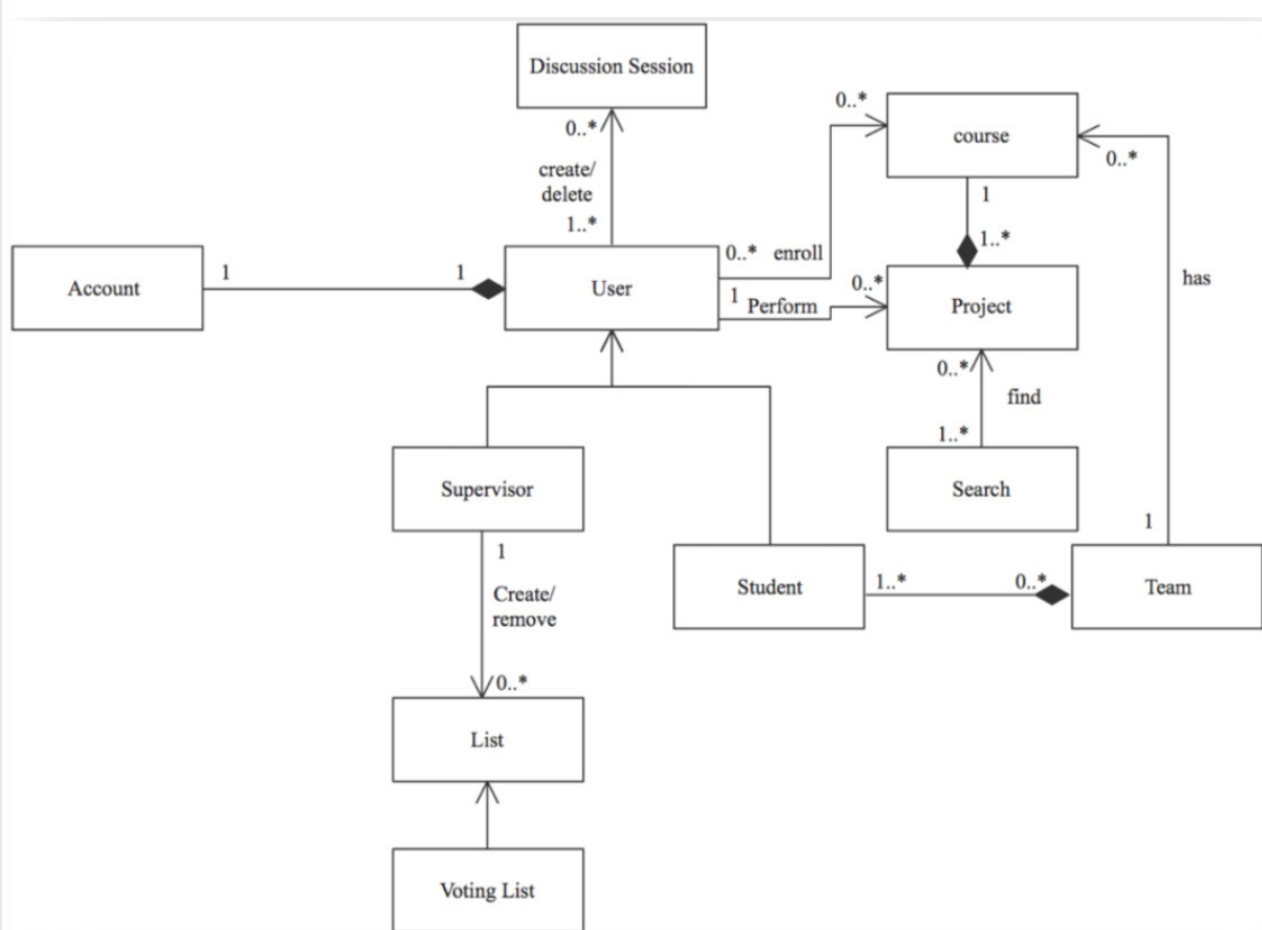

Methodology

waterfall model :

Domain Model

Future work

After we end from Analyzing and designing our software, in future we decided to continue our project to the implementation phase, and testing it in environment of FCIT college for male and female student .
